Skin Resurfacing Treatment Information Sheet

Resurfacing the skin

We use the UltraPulse CO2 laser, which uses fractional laser technology to effectively resurface the skin.

The UltraPulse uses tiny columns of laser energy that leave part of the skin intact to help speed recovery and reduce risks.

Using resurfacing, we can treat:

- Wrinkles
- Acne scarring
- Skin pigmentation
- Scarring
- Loose skin
- Poor skin texture
- Poor skin tone
- Skin growths including seborrheic keratosis (senile warts) and syringomas
- The neck, back and décolletage

When will I see results?

Full recovery takes approximately 4-14 days depending on the energy level used in treatment.

Swelling of the eyes/face may occur for a few days. Scabbing, peeling and flaking may occur for a week.

The skin can appear red after treatment. This usually subsides within four weeks, when your fresh, new skin will be revealed.
